4 ONE SCAN PER PERSON

Everyone scans their own code. Don't let anyone tailgate through behind you — it keeps the gym safe for all members.

THE BASICS

TRAINING & NUTRITION BASICS

Don't overcomplicate it. Get these few things right and stay consistent — that's 90% of it.

A SIMPLE DAILY MACRO SPLIT

A solid starting point for most people. Adjust as you learn what works for your body and goal.

1g

Protein — 1g per lb of bodyweight

Weigh 180 lb? Aim for ~180g of protein a day. Protein builds and holds muscle and keeps you full.

1L

Water — 1L per 50 lb of bodyweight

Weigh 180 lb? That's roughly 3.5–4L a day. Hydration drives energy, recovery and performance.

WEIGHT LOSS VS WEIGHT GAIN — IT'S SIMPLE

Calories in vs calories out. That's the whole thing.

DEFICIT → LOSE

Eat fewer calories than you burn and you lose weight. Every time.

SURPLUS → GAIN

Eat more than you burn and you gain. Slight surplus + training = muscle.

Don't let anyone overcomplicate it. Nobody in history went a week without food and put weight on. Track roughly what you eat, stay in a deficit to lean down or a small surplus to build, and be consistent. Consistency beats perfect.

This guidance is provided for information purposes only and is general in nature. It is not medical, dietary or professional advice. Always consult a qualified healthcare professional before starting or changing any training or nutrition programme, particularly if you have any pre-existing health conditions, injuries or concerns.
